# Cable Mesh Grip

With flexibility,moderate softness,high elasticity, wear resistance,corrosion resistance,closely mesh, the cable can easily set into the open mouth,passing the bend easily,will not hurt the cable,durable.

Cable mesh grip is the mesh structue,more drawing and more tightly,only need to stay in the opposite direction to promote network,cable can be easily wear into or takeout the cable

Using Swedish ALURIT hydraulic press to press at the pressure point of cable nets,smooth appearance,large tensile load strength.

## PRODUCT SPECIFICATION

**Material:** Galvanized steel wire, stainless steel wire
**Tensile Strength:** Static ≥ 50MPa, Dynamic ≥ 35MPa
**Abrasion Resistance:** Wear volume ≤ 120mm³
**Flexibility:** No surface cracks when the bending radius is ≤ 3 times the cable's outer diameter
**Corrosion Resistance:** No cracking after a 500-hour neutral salt spray test
**Weather Resistance:** Covers for outdoor use must pass a 1000-hour UV aging test without cracking
**Temperature Resistance:** Stable performance within the range of -40°C to +120°C, with a strength retention rate ≥ 85% after 168 hours at 150°C high temperature.
