

Channel Steel Support

Galvanized carbon steel supports are crucial components that serve as the link between upper and lower parts in electrical installations. They are fabricated using channel steel and/or angle steel through drilling or welding processes. The wiring box (explosion-proof box) is supported by fasteners such as bolts and nuts.

■ PRODUCT SPECIFICATIONS

Material: Galvanized carbon steel

Product Size: 63*4.8*4*1800mm, length Customizable

Angle Steel Support

Galvanized carbon steel supports are crucial components that serve as the link between upper and lower parts in electrical installations. They are fabricated using channel steel and/or angle steel through drilling or welding processes. The wiring box (explosion-proof box) is supported by fasteners such as bolts and nuts.

■ PRODUCT SPECIFICATIONS

Material: Galvanized carbon steel

Product Size: 50*50*5*1800mm, length Customizable

Threading Pipe

Galvanized carbon steel wiring pipe, including a short section, a long section, and a 90-degree elbow. After connection, the short sections and the elbow parts are pre-embedded in the concrete, while the long sections are connected to the junction box through zinc alloy joints. Its main function is to protect and guide electrical wires and cables.

■ PRODUCT SPECIFICATIONS

Material: Galvanized carbon steel

Product Size: 3", 200×1100mm, length Customizable
