

Petroleum Coke Breeze

Petroleum Coke Breeze is a finely granulated form of petroleum coke, a byproduct of the oil refining process. It is created by crushing raw petroleum coke into small, manageable particles.

This material has found extensive applications in various industries, particularly for grounding and cathodic protection purposes.

Below, we delve into its material composition, application industries.

■ KEY FEATURES

- 1.Versatility application
- 2.High Conductivity
- 3.Uniform Granule Size
- 4.Environmental Friendly
- 5.High Carbon Content

■ PRODUCT SPECIFICATIONS

Fixed Carbon: 99.0%

Ash: 0.6%

Moisture: 0.05%

Volatiles: nil (950°C)

Bulk Density: 1185kgs/m³

Packaged Weight: 25kgs/Bag

■ APPLICATIONS

- 1.Grounding Systems
- 2.Construction and Infrastructure
- 3.Cathodic Protection
- 4.Environmental Engineering
