

Sign Support

Sign Support are important infrastructure set on the ground to indicate the path and direction of underground pipelines or to serve as a warning. They are widely used in multiple fields such as power, communication, gas, water supply, and railways. Their core function is to mark the location of underground pipelines to prevent damage caused by construction excavation and to serve as a safety warning.

APPLICATIONS

Underground pipeline Protection

PRODUCT SPECIFICATIONS

Materials: Carbon steel, fiberglass reinforced plastic

Dimensions: 100×100×1600mm, Customizable

Support Rod: Solid Carbon Steel, $\Phi 12 \times 300$ mm

Pile Body Color: Yellow

Text: Customizable
